

Call Prep: Systemic Compliance

Meeting: Fractional Chief AI Officer Kickoff — Tuesday, July 1, 2026 @ 4:00 PM
Attendees: Robin Graham, Kevin Graham (Systemic Compliance), Robyn Fuentes (Improving)
Your Role: Fractional Chief AI Officer
Your Goal: Establish trust, understand current SC.IMS state, agree on 90-day focus, set operating model.

Account Snapshot

Field	Value
Company	Systemic Compliance, LLC
Founded	Early 2025 (Kevin Graham + original Veriforce core team)
HQ	Texas, USA
Industry	Pipeline Safety & Regulatory Compliance (Oil & Gas)
Focus	OQ compliance, Pipeline Safety Management Systems (PSMS per API RP 1173), contractor alignment
Products	SC.ORB (contractor compliance platform), SC.IMS (AI-driven requirements & gap-analysis — the IP in question)
Engagement	Fractional advisory — 16 hours over 3 months, quarterly retainer, SOW signed
Sourced By	Devlin Liles → Robyn Fuentes → Stephen Johnson → David O'Hara

Who You're Meeting

Kevin Graham — Founder
30+ years in pipeline compliance. Founded Veriforce in 1998, sold 2009. Navigated PE exits multiple times (OQSG sold twice). Sat on API RP 1173, API RP 1161, and B31Q committees — he wrote the standards. Wants to get the IP right and not repeat the PE-exit mistakes. He'll probe whether you understand the space. Come in as a peer, not a consultant.

Robin Graham — Co-founder / Ops
Handles finance/operations side. Devlin's email noted she should capture time against the SC.IMS build for R&D tax credit. Likely the business/ops decision-maker alongside Kevin. Talking point: R&D tax credit — she should be tracking this if profitable this year.

Robyn Fuentes — Improving, President South Texas
Your internal sponsor. She closed the SOW. She's counting on you.

SC.IMS — What You're Advising On

SC.IMS is an AI-driven requirements and gap-analysis tool built inside Claude Cowork. Currently running on Anthropic Team seats (30-day retention, no training, data-private — safe but needs to graduate).

What they have: Real IP. A requirements crosswalk and gap-analysis capability for pipeline safety. A contractor equivalency engine and peer benchmarking across operators. The moat is the interconnectivity —

network effects from multi-operator data are hard to copy, prompts are not.

Five structural problems (your starting brief):

1. **Trapped IP** — lives inside an Anthropic account; needs to be extracted, owned, and portable before it can be sold or audited
2. **Spreadsheet-based requirements store** — creates semantic saturation risk (Claude merging requirements like 192.31.4.b and .c)
3. **No evaluation harness** — AI checking its own work fails ~91% of the time; needs external graders and edge-case tests
4. **Cognitive surrender risk** — SMEs stop catching errors the more they see AI succeed; track reviewer kickback rates
5. **Passive governance** — output is a report; PSMS is Plan-Do-Check-Act; value is in intervention before the mistake, with trended KPIs

Two strategic paths:

- **Path A: Keep & Scale** — build SC.IMS into value-priced software + consulting; 10+ year annuity if moat holds
- **Path B: Sell the IP** — harden it, sell into 10-20 large midstream operators, 4-year harvest before knockoffs appear

Both paths require the same first move: get the asset out of Cowork into a framework they own.

KSTG Architecture Framework (Devlin's)

As corpus grows, one search method isn't enough. Four in parallel:

Layer	Function
K — Keyword	Exact citation/clause matches (literal 49 CFR 192 reference)
S — Semantic	Meaning and intent (passages satisfying a requirement without quoting it)
T — Temporal	What applied when — handles grandfathering and effective dates
G — Graph	Connective tissue — links, equivalencies, peer relationships (powers benchmarking)

K+S only = semantic saturation. Adding T+G lets the system distinguish similar requirements and reason across them.

Suggested Agenda

1. **Open (5 min)** — Brief background, acknowledge Devlin's intro, set tone: working partner, not a memo-writer
2. **Current state of SC.IMS (15 min)** — Where does it live? Who uses it? What does output look like? How are SMEs reviewing today?
3. **Strategic intent (10 min)** — Path A or B, or still open? Any pilots running? Timeline pressure from investors or competition?
4. **First 90 days (10 min)** — Of Devlin's six roadmap items, where do they want to start? Your recommendation: evaluation harness first.
5. **Operating model (5 min)** — How to use your time, comms cadence, who else to loop in (engineering, IP counsel, tax)

Discovery Questions

1. What does the SC.IMS workflow look like end-to-end — from a client loading a document to getting an output?
2. Have there been near-misses where SC.IMS returned something that looked right but wasn't? How was it caught?
3. Are clients currently paying for SC.IMS outputs, or is this still pre-commercial?
4. What's your read on the moat — are competitors starting to approach what you've built?
5. Have you engaged IP counsel yet?
6. What does dev capacity look like — is Kevin building it, or do you have engineers?

Friction Points

Risk	Response
Kevin tests your domain knowledge	Know: 49 CFR 192 = natural gas pipelines, 195 = hazardous liquids, API RP 1173 = PSMS voluntary standard. Know KSTG cold.
They want a stack recommendation immediately	Don't give one. "I'd rather understand what you've built before I tell you what to change."

They want to move faster than 16 hours	"Let's make sure the first 16 hours are the most leveraged — that means starting where the risk is highest."
Scope creep into SC.ORB	SC.ORB is already in market. Keep scope on SC.IMS.
Robin asks about R&D tax credit	Validate it. Recommend they get a tax attorney if they haven't already.

Key Contacts

Person	Role	Email
Kevin Graham	Founder, SC	kgraham@systemic-compliance.com
Robin Graham	Co-founder/Ops, SC	rgraham@systemic-compliance.com
Robyn Fuentes	President South Texas, Improving	robyn.fuentes@improving.com
Stephen Johnson	Improving (deal originator)	stephen.johnson@improving.com
Devlin Liles	Chief AI & Consulting Officer, Improving	devlin.liles@improving.com
