

About Systemic Compliance

One Platform. One Truth. Compliance as a Systemic Outcome.

Who We Are

At Systemic Compliance, we are revolutionizing regulatory operations for oil and gas pipeline operators and contractors. We move beyond the "box to check" mentality, leveraging uniformity and economies of scale to transform compliance from a fragmented overhead into a systemic business advantage. We build an Integrated Management System (IMS) into which each operator's applicable standards and regimes are integrated, API RP 1173 (PSMS) is one of several, alongside ISO 45001, OSHA PSM, EPA RMP, the PHMSA 49 CFR regulations, and ISO 9001, scoped to each operator and extensible as needs grow.

The Evolutionary Challenge vs. the Systemic Solution

The Cost of Today's Failure	The Systemic Solution
The Variability Paradox: Operators bear 100% of the liability for contractor actions, yet existing compliance models provide zero systemic control. High variability across a large contractor base creates significant enforcement risk.	Unified Control: We have built a system that fully honors the necessary variability among Operators while dramatically minimizing the logistical burden on contractors. Since Operators assume 100% of the liability, they deserve 100% of the control.
The Penalty of Misalignment: Incorrect OQ task lists, unauthorized evaluators, and conflicting safe-work procedures create significant penalty and enforcement exposure.	1:1 Strategic Mapping: Our platform requires every contractor to map directly to your specific procedures and requirements. We eliminate conflicting practices and replace them with a single, unified framework that guarantees full contractor alignment.
Fragmented MOC Processes: Management-of-change gaps, where procedure updates never reach the field, are a costly and common failure.	API RP 1173 Integration: Our MOC engine automates the process. It identifies ripple effects across the operator's programs and gives the Operator the tools to manage the change and its ripple effects instantly.
The "PDF Culture" Drain: Manual document exchange wastes high-value engineering time, and certificate-of-insurance lapses often go unnoticed until they become major litigation exposure.	Operational Velocity: Reclaim time with automated reporting. For COI tracking, contractors receive automatic notifications 60, 30, and 7 days before expiration; Operators get real-time status visibility and instant reporting.

Nearly Two Centuries of Regulatory Authority

Our leadership team comprises industry pioneers who helped author many of the standards governing the modern oil and gas pipeline sector. With more than 180 years of combined expertise, we provide unmatched institutional knowledge.

Kevin Graham: Founder of Systemic Compliance and the original founder of Veriforce; 30+ years of experience in OQ, risk management, regulatory consulting, and management systems.

Warren Miller: 50+ years in the energy industry; 22+ year PHMSA veteran and former Operations Supervisor; co-developer of national inspection protocols who shaped the OQ standards used today.

Mike Comstock: 40+ years in natural gas and utilities; former Chairman of APGA and leader within the ASME B31Q Standards Committee.

John Chin: 46+ years of pipeline engineering authority; served 40 years on the ANSI/ASME B31.8 committee and 14 years on B31Q.

Brad Heck: 40+ years in pipeline/DOT compliance; co-founder of OQIP, MEA Hall of Fame inductee, member of the ASME B31Q Standards Committee.

Core Services & the SC.ORB Platform

Consulting Services (traditional project or co-sourced model). Elite subject-matter expertise in 49 CFR Parts 190-199: O&M procedure development, OQ program design, audit readiness, and PSMS implementation. We do not just prepare you for audits; we build the systems that make "audit-ready" your permanent state.

Training & Competence. The Competence & Progression Framework and Competence Architect define what each role must know and do, anchored to your own procedures, and build the training in four vehicles with exams, LMS-ready.

Contractor Management. We support the contractor approval process, help contractors conform with Operator-specific requirements, and conduct robust contractor audits with corrective-action support, fully integrated within our digital ecosystem.

The SC.ORB Platform. The industry's first true management-system platform, connecting operators and contractors into a living, change-aware ecosystem:

- **Organizational Requirements Baseline (ORB):** a single, version-controlled source for all procedures, covered tasks, KSAs, and safe work practices.
- **1:1 Procedure Mapping:** eliminates the risk of contractors using generic tasks by forcing alignment with your specific O&M manual.
- **MOC & Requalification:** automatically detects changes in the ORB and triggers requalification for affected workers where required.
- **Built to grow** with your PSMS development and implementation efforts.

The Economic and Operational Advantage

Advantage	Detail
Operator Cost Reduction	Achieved through a systemic approach, collaborative economies of scale, and elimination of duplicated administrative efforts.
Contractor Savings	By replacing multiple high-cost legacy platform subscriptions with one integrated framework.
Proactive Risk Enforcement	We move beyond checklists through a systemic approach, addressing the major litigation and enforcement risks associated with insurance lapses, unverified evaluations, procedure conformance, and misalignment.
Strategic Independence	Unlike PE-backed firms, Systemic Compliance is independent of private-equity influence, ensuring total alignment of interests and prioritizing industry safety.

Join the Future of Compliance

Move to a system where compliance is a designed outcome of your business process, not a matter of chance. We invite forward-thinking Operators to influence the development of our ecosystem and shape the next evolution in risk management and regulatory compliance while securing a first-mover advantage.
