

Co-Sourced Compliance

One Platform. One Truth. Your Fractional Compliance Department for Pipeline Operators

Instead of relying on a single hire, gain access to our entire specialized team: broader expertise, greater redundancy, scalability for peaks, and built-in technology support, all supporting the operator's Integrated Management System on an ongoing basis.

Why Co-Sourced Compliance?

Limitations of a Single FTE	The Co-Sourced Advantage
Single point of failure: knowledge exits with the individual.	Institutional redundancy: continuous coverage regardless of turnover.
Limited depth: no one person covers every PHMSA/State requirement.	Multidisciplinary expertise: on-demand access to specialized SMEs.
Fixed capacity: cannot scale for audits, incidents, or expansions.	Scalable surge: absorb workload peaks without emergency hiring.
Manual tracking: spreadsheets create silos and missed deadlines.	SC.ORB platform: real-time visibility and compliance tracking.

Engagement Structure

- **Layer A - Onboarding & Baseline:** a one-time assessment: applicability matrix, 12-month work plan, gap assessment, and corrective-action roadmap.
- **Layer B - Recurring Support:** ongoing compliance management, regulatory monitoring, advisory access, and fractional support, scaled to tier.
- **Layer C - Add-On / Surge:** event-driven work; all clients receive a minimum 10% discount against standard rates on surge and project work.

The Pod Staffing Model

Every engagement is supported by a dedicated pod, not a single consultant, so vacations and turnover never interrupt coverage.

Role	Primary Function	Strategic Value
Engagement Lead	Primary POC; fractional compliance manager	Owens work plan, deliverables, and the executive relationship
Analyst / Coordinator	Recurring deliverables, records QA	Training, program and procedure development/review, regulatory audit prep
SME Access	Specialized technical expertise	Integrity, MAOP, and environmental deep-dives
Principal Oversight	Escalation and quality review	Audit readiness; safety net for complex enforcement

Included across the engagement: regulatory monitoring and rule-change alerts, compliance-calendar maintenance, records QA and spot checks, corrective-action tracking, audit and inspection readiness support, management dashboards and reporting, phone and email advisory access, regulatory interpretation and prioritization, a designated Engagement Lead, and SC.ORB platform access.

Service Tiers - Scaled for Complexity

Tier	Best For	Key Features
Tier 1: Foundation	Small / municipal; simple profiles	SC.ORB, quarterly touchpoints, alerts
Tier 2: Essential	Smaller operators, limited staff	Tier 1 + monthly advisory, designated lead, rollover
Tier 3: Managed (recommended)	Mid-to-large	Tier 2 + full CAPA, fractional manager, monthly dashboard
Tier 4: Embedded	High-risk / multi-state	Tier 3 + weekly touchpoints, full pod, mock audits

Co-Sourced vs. Full-Time Employee

Metric	Seasoned FTE	Co-Sourced (Tier 3)
Capacity	165 hrs (single person)	~60 hrs + full team access
Resource depth	Single individual	Full pod + SME access
Technology	Extra (software licenses)	SC.ORB included
Overhead / benefits	35%-50% burden	None
Recruitment	Significant cost + multi-month ramp	Productive from day one

The result: broader expertise and no single-point-of-failure risk.

SC.ORB Platform - Included at All Tiers

The operational backbone of every engagement: a compliance calendar with automated deadline alerts, real-time action tracking, a centralized audit-ready document repository, contractor-qualification workflows, and management dashboards for program-health visibility.

Service Level Standards

- **Routine inquiries:** response within 1-2 business days.
- **Regulator inquiries:** same-day acknowledgment; action plan within 24 hours.
