

SC.ORB

One Platform. One Truth. Contractor Compliance as a Systemic Outcome.

A unified, cloud-based platform that aligns contractor personnel (and internal personnel, if the Operator chooses) with your specific policies, procedures, and requirements in real time, transforming compliance from fragmented overhead into a systemic outcome. SC.ORB operationalizes the operator's Integrated Management System (IMS) as a single source of truth.

Why SC.ORB?

Operators bear 100% of liability for contractor actions, yet most compliance systems give them zero systemic control. This is the Variability Paradox. SC.ORB permanently fixes it.

The Problem Today	The SC.ORB Solution
Wrong OQ Task Lists: contractors use someone else's covered tasks, not yours.	1:1 Mapping: forces every qualification to map to your procedures and your task list.
Unauthorized Evaluators: lapsed evaluators invalidate qualifications.	Evaluator Control: only SC-authorized, audited, and tracked evaluators qualify personnel.
Conflicting Safety Procedures: contractors follow their own, often misaligned, safety procedures on your site.	Standardized SWP: contractors adopt your safety framework; one audit covers all.
Expired Insurance Unnoticed: COI lapses lead to major litigation exposure.	Real-Time COI Tracking: auto-alerts at 60/30/7 days; approved status blocked until corrected.
Procedure Changes Never Reach Contractors: post-MOC requalification gaps.	MOC Module: instantly flags affected tasks and people and triggers requalification where appropriate.
No Real-Time Visibility: an "e-mail me the PDF" culture wastes the Operator's time.	Live Operator Portal: every record instantly visible, no searching, no delays.

Platform Architecture

SC.ORB is not another questionnaire portal. It is the industry's first true management-system platform, connecting operators and contractors into one living, change-aware ecosystem.

- **Organizational Requirements Baseline (ORB):** your single, version-controlled source for all procedures, covered tasks, KSAs, safe work practices, and any other requirements the Operator deems important.
- **Management of Change (MOC) Module:** automatically evaluates changes to organizational requirements, identifies affected tasks and people, sends notification, and triggers precise requalification where required.
- **Phase 1 Coverage:** Operator Qualification (OQ), Safe Work Practices (SWP), Drug & Alcohol Testing, COI Verification.
- **Expandable Framework:** add Incident Investigation, Emergency Response, and other PSMS elements without new onboarding.

PSMS / API RP 1173 Alignment

PSMS Element	Today's Problem	How SC.ORB Enforces Alignment
Management of Change	No unified process across sites	Automated change detection and system-wide management
Competence & Training	Multiple OQ platforms with conflicting criteria	A single ORB maps every task to your procedures

Operational Controls	Contractors bring their own procedures	Contractors conform to the Operator's own procedures and requirements
Risk Management	Risk registers in spreadsheets; contractors never see them	Operator-specific risk-mitigation priorities drive ORB requirements automatically

Operator Pricing - Annual Platform Fee

Simple, transparent pricing based on the number of active contractors you manage. No hidden fees, no per-transaction costs. Includes the SC.ORB platform license, unlimited users, full ORB build and maintenance, data migration from legacy platforms, and a dedicated onboarding specialist.

Additional Operator Services	Description
Contractor Auditing	Each approved contractor audited at least once annually.
SME Consultant	Subject-matter-expert consulting support.
Administrative Support	Administrative and clerical consulting support.

Contractor Pricing

Service	Description
Initial Account Setup	One-time fee at onboarding.
Individual Account Fee	Per individual; includes OQ, safety, D&A, COI, and records management.
Annual Audit	Minimum once per year; OQ, safety, D&A, COI, and records verification.
Evaluator Certification	One-time application fee.
Initial Evaluator Training	Instructor-led certification training.
Annual Refresher Training	Web-based annual refresher.

The Cost of Inaction

Contractor-compliance failures carry significant penalty, enforcement, and litigation exposure. SC.ORB is designed to prevent the most common and costly failures:

Risk Area	How SC.ORB Prevents It
OQ violation (wrong task list)	1:1 procedure mapping eliminates misalignment.
Evaluator lapse	Centralized evaluator authorization and tracking.
SWP violation	Standardized safety framework across all contractors.
Post-MOC requalification gap	Automated change detection and requalification triggers.
COI lapse leading to litigation	Real-time tracking with automatic status block.
