Call Prep: Lance Clevinger - Helixor (Intro Call)

3:30-4:00 PM CDT (30 min) | Microsoft Teams (link on invite) | New contact - no prior 1:1 history

Calibration note: This is an inbound peer/networking contact, not a sales-sourced lead. Lance messaged David on LinkedIn on or around Oct 20, and David had Alice Mburu schedule this call. No sales motion, no CRM touch, no stated agenda. Treat as a peer exchange between two people in the AI space. Do not pitch an Improving service today - and equally, do not assume Lance has no agenda of his own; the LinkedIn DM that started this is not in the email record.

Who They Are

Company	Helixor Inc.
Industry	Enterprise AI software - deterministic / neurosymbolic decision platform
HQ	Not found (not stated on company site)
Founded	Not found
Size	Not found (startup-stage signals: 4X founder, small web footprint)
Known tech stack	Decision Engine (policy compiled to in-process runtime, auditable decision receipts), Optimization Engine (GPU-accelerated constraint solving for cost/service/risk), Digital Worker Platform (configurable agents with defined jobs, skills, tools, data access), LLM router, private-VPC REST deployment
Email domain	helixor.ai

Company Overview

Helixor sells what most of the market isn't building: deterministic, auditable AI decisioning. Their pitch is "Deterministic, Neurosymbolic AI" with "Decision Proofs" and "Cryptographic Audit Receipts" - policy compiled into an in-process runtime that returns an auditable receipt or abstains, rather than a probabilistic LLM answer. They pair that with a GPU-accelerated optimization engine and a digital-worker platform, and they've productized the stack into sixtydegrees.ai, an autonomous supply-chain offering. Deployment story is enterprise-friendly: in-process runtime, private-VPC REST service, LLM router.

Recent news / initiatives:

- Productized platform into sixtydegrees.ai (autonomous supply chain) - the clearest signal of where they're taking the technology to market
- Positioning hard against probabilistic-only AI: auditability, abstention, and cryptographic receipts are their differentiation

Competitive/market pressures:

- Selling determinism into a market currently hypnotized by generative AI - their wedge is regulated/ high-stakes decisioning where audit trails matter

Sources: helixor.ai (company website) only - no notable press coverage found; WebSearch unavailable this run, so public-footprint depth is limited.

Who He Is

- **Title:** Founder, Helixor (self-described "4X Founder | AI & Deep Tech Leader" per his LinkedIn headline; exact title not stated on the company site)
- **Self-description (LinkedIn headline):** "Chief Servant | 1X Husband | 2X Dad | 4X Founder | AI & Deep Tech Leader"
- **Education:** Not found
- **Location:** Not found
- **Affiliations:** Not found
- **Public-facing work:** Not found beyond LinkedIn presence
- **LinkedIn:** Messaged David directly on LinkedIn ~Oct 20; profile URL not captured

"Read on him": Serial founder (4X) running an AI decision-platform startup, reaching out peer-to-peer. Calibrate as founder-to-operator exchange - he's likely exploring mutual value (partnership, market insight, possibly pipeline for Helixor), not sitting for a pitch in either direction.

Common Connections

LinkedIn mutual connections could not be pulled for this run - browser-based LinkedIn check not exercised (time-boxed prep) and Clay unavailable. The relationship originated on LinkedIn, so mutuals very likely exist and are worth a glance before or during the call if time permits.

Reason for the Call

Lance Clevinger messaged David on LinkedIn on or around Oct 20, 2026 (LinkedIn notification email: "Lance just messaged you... awaits your response"). David then had his EA Alice Mburu schedule this call: "David asked me to reach out and get a Teams call on the calendar for you both" (Alice Mburu, "Re: Scheduling time to connect: David / Lance," Oct 20, 2026). Lance confirmed the same day: "October 26th at 3:30 PM works great... Looking forward to it." Lance initiated contact, and the content of his original LinkedIn message is not in the email record - he has a reason for reaching out that will surface in the first five minutes.

Do not assume:

- This is not an Improving sales opportunity - no CRM record, no sales touch, no stated interest in Improving's services anywhere in evidence.
- Do not assume Lance is only networking - 4X founders don't cold-DM strangers without a purpose; listen for it before offering anything.

- Do not assume urgency or a defined ask - nothing in the thread states a topic.
- Do not pitch Improving services in the opening.

Suggested Talking Points / Questions

1. **Let him open:** "You reached out on LinkedIn - what caught your attention?" He initiated; his answer frames the whole call.
2. **Compare notes on enterprise AI reality:** Helixor bets on deterministic/auditable AI while the market chases generative. Ask where he's seeing buyers actually pay for auditability - regulated industries, supply chain, finance? Share what Improving's clients are actually adopting versus piloting (GEHC AI-routing work, AI adoption patterns across accounts).
3. **Sixtydegrees.ai as a conversation anchor:** autonomous supply chain is a concrete vertical bet - ask what pulled them into supply chain specifically and what traction looks like. Genuine curiosity, not diligence.
4. **Founder-to-operator exchange:** 4X founder means scar tissue. If the conversation warms up, what he's learned about taking deep-tech to enterprise buyers is worth real time - and so is your view on what enterprise buyers in Texas are actually funding right now.

Landmines / Notes

- Don't pitch. No evidence he wants Improving's services, and leading there kills a potentially useful relationship.
- Don't assume he's selling either - but stay alert for the pivot; if he demos Helixor, engage genuinely rather than defensively.
- Don't overshare Improving client specifics - he's a startup founder in adjacent space, not a client or partner (yet).
- Don't dominate the air time - you have almost nothing on him; the call's value is listening.

Open Questions Going In

- The LinkedIn DM that started this is not in the email record - what Lance actually asked for is unknown until he says it.
- His exact role/title at Helixor (CEO? CTO?) is unconfirmed - the company site lists no leadership.
- Company stage (funding, headcount, customers) unknown - web footprint is thin.
- Whether this is a one-off conversation or the start of an ongoing relationship.
- Location unknown - worth noting timezone if he's not Central.
